Schmid Elektronik AG has released revision V1.4 of the ZSOM-Mini. This revision comprises production- and layout-related changes only. There is no change to the electrical function, the connector pin assignment or the firmware and software interface of the module, and none of the changes require any action by the user. Form, fit and function of the ZSOM-Mini V1.4 remain fully compatible with V1.3. The individual changes are listed below. The ZSOM-Mini V1.4 is available from Q2 2026; the V1.3 is no longer manufactured after the changeover.
